Cash (%)	0 - 10

OUR STRENGTHS

With a focus on the higher quality segment of the below investment grade market, our strategy seeks to generate attractive risk adjusted returns over the long term, while also preserving capital.

We believe our key competitive strengths are:

Investment Style — Portfolio Managers, research analysts and traders work together; focused primarily on security selection within a duration neutral portfolio.

Size — Our size helps ensure sufficient diversification at the portfolio level, while being able to source new issue allocations, participate in smaller deals, and remain sufficiently nimble to reposition the portfolio as market opportunities arise.

Experience — Our deep credit experience helps enable us to navigate various market cycles, looking for any market dislocations and exercising an appropriate sell discipline.

PHILOSOPHY AND PROCESS

We believe fixed income markets are efficient with respect to interest rate risk, but regularly misprice securities that are exposed to credit, downgrade and liquidity risks.

We seek to exploit inefficiencies in the market and provide clients with excess returns to the benchmark without incurring undue risk through:

- Conducting proprietary, in-depth fundamental research
- Targeting duration-neutral portfolios
- Constructing portfolios with attractive risk / reward characteristics

ALPHA DRIVERS

- Portfolios are constructed from the bottom up, with a focus on relative value regardless of sector
- Seek to identify those credits that are potential upgrade candidates to investment grade
- We do not put a large emphasis on macro bets, such as duration and term structure
- Willing to invest in off-the-run bonds and loans allow our credit research team to take a deeper dive to identify value
- Believe in the ability to turn the portfolio over to source new ideas at attractive levels and aim to exit positions with rich valuations

1. Stated at estimated fair value (unaudited). High Quality High Yield is a strategy of public fixed income assets. Total Strategy Assets for High Quality High Yield include all assets managed by MIM in the High Quality High Yield strategy and may include certain assets that are not included in Composite Assets (as presented in GIPS® Composite Statistics and Performance table on the following page) for High Quality High Yield.

2. Please see the full GIPS® disclosures at the end of this document.

3. Any portfolio targets and/or limits are used to illustrate the Investment Manager's current intentions and may be subject to change without notice. Target Alpha is an investment objective and not a promise of future results or performance. This target is considered gross of fees and over a 3 to 5 year time horizon under normal market conditions. There can be no assurance that a portfolio will achieve its target alpha.

Custom Benchmark ²							6.84

RELATIVE PERFORMANCE (GROSS OF FEES)²

- Past performance is not indicative of future results. Net of fee returns reflect the deduction of investment advisory fees and are calculated in the same manner as gross of fee returns. Net of fee returns are calculated using the highest fee rate disclosed in the Form ADV. Fees for separate accounts may be negotiable depending upon asset size and type of account.
- Effective April 1, 2012, the performance benchmark for the High Quality High Yield composite is the ICE BofA U.S. High Yield BB-B Constrained Index. From November 1, 2007 to March 31, 2012, the performance benchmark was the ICE BofA U.S. High Yield Master II Constrained Index. This change was made to better align the benchmark with the composite's mid-grade focus. From inception date through October 31, 2007, the benchmark was the Bear Stearns High Yield Index. This change was made due to the ICE BofA benchmark being the more widely used index for institutional investors. Therefore, the Custom Benchmark represents a blend of these benchmarks. For additional benchmark disclosure, please see the full GIPS® disclosures at the end of this Presentation.
- The eVestment Universe ranking is calculated by eVestment using investment performance returns gross of fees and strategy descriptions self-reported by participating investment managers and are not verified or guaranteed by eVestment. eVestment defines each Universe and selects the participating managers for the Universe it determines have similar investment strategies. The Universe ranking uses gross performance as manager fees may vary so that returns will be reduced when advisory fees are deducted. Performance returns for periods greater than one year are annualized. Additional information regarding net performance rankings is available upon request. The reports of the Universe percentile ranks were sourced on April 27, 2022, and represent 93% of the reported eVestment High Yield Fixed Income High Quality Universe as of that date. MIM has not verified and cannot verify the information from outside sources.

QUARTERLY PERFORMANCE ATTRIBUTION

The portfolio's quarterly underperformance was largely driven by security selection, particularly in the healthcare sector. A certain paper company detracted from performance due to its large European exposure and roughly 10% of 2021 sales coming from customers within Russia and Ukraine. Europe accounted for over half of the company's sales, with 10 manufacturing facilities spread across the region. A food and beverage company's rate-sensitive 2050 notes underperformed due to the move higher in interest rates. Concerns surrounding the satellite development of a certain telecom provider further detracted from performance. A gas distributor outperformed after reporting better-than-expected fourth quarter earnings, with EBITDA roughly 20% ahead of estimates. The company benefitted from the shortage of natural gas supply into Europe as a result of the Russia-Ukraine War as well as the relatively high price differential between domestic natural gas and global diesel. Longer-duration bonds of certain healthcare companies were also weaker on the quarter. The portfolio's financial services providers detracted from performance as the impact of rates, the Russia-Ukraine War and general economic conditions in the United States challenged the sub-sector.

STRATEGY

The long-term recovery of the high yield market, and broader risk assets, continues to be supported by above trend growth, strong corporate earnings, and stable to improving credit fundamentals. We continue to believe the short-term will be defined by pockets of volatility as geopolitical events, virus variants, and inflationary pressures challenge financial markets.

While markets have regained some composure from the volatility experienced in the first quarter, we continue to maintain a moderately cautious approach as labor shortages, higher raw material costs, and continued supply disruptions will remain a focus as investors weigh the impact on margins and corporate earnings. In addition to the more tangible variables, the Russian-Ukraine war will continue to feed volatility as we have little conviction of a short-term resolution. Notably, we believe few high yield issuers have direct exposure to the war, supporting positive sentiment in the asset class.

As we expect primary market activity to recover from the light issuance seen in the first quarter, we believe adequate liquidity will keep near-term defaults historically low, supporting investor sentiment in the asset class. As such, we will maintain our efforts to seek out credits which will provide the best relative value opportunities to drive performance.

Past performance is not indicative of future results. The information presented is only available for institutional client use.

1. Effective April 1, 2012, the performance benchmark for the High Quality High Yield composite is the ICE BofA U.S. High Yield BB-B Constrained Index. From November 1, 2007 to March 31, 2012, the benchmark was the ICE BofA U.S. High Yield Master II Constrained Index. This change was made to better align the benchmark with the composite's mid-grade focus. From inception date through October 31, 2007, the benchmark was the Bear Stearns High Yield Index. This change was made due to the ICE BofA benchmark being the more widely used index for institutional investors. It is not possible to invest directly in an unmanaged index. All index returns presented are provided to represent the investment environment existing during the time periods shown and will not be covered by the future report of independent verifiers. For comparison purposes, the index is fully invested and includes the reinvestment of income. The returns for the index do not include any transaction costs, management fees or other costs.
 2. The dispersion of annual returns is measured by the standard deviation among asset-weighted portfolio returns represented in the composite for the full year. "N/A" is an indication that the information is not statistically meaningful due to an insufficient number of portfolios (five or fewer) in the composite for the entire year. Standard deviation is only presented for accounts managed for a full calendar year.
 3. The three-year annualized standard deviation measures the variability of the composite and the benchmark returns over the preceding 36 month period. The standard deviation is not presented for 2000 through 2010 because it is not required for periods prior to 2011. It is also not presented for quarter-ends.
 4. Prior to July 1, 2019, the investment team was part of a prior firm. Therefore, "Total Firm Assets (BB)" is left blank for year ends before the team joined MetLife Investment Management.
- For purposes of the Global Investment Performance Standards ("GIPS") compliance, the "Firm" is defined as MetLife Investment Management ("MIM"). MIM is MetLife, Inc.'s institutional investment management business. The Firm is defined to include all accounts captured in MetLife's Assets Under Management. On September 15, 2017, MetLife, Inc. ("MetLife") acquired Logan Circle Partners ("LCP") and the Firm was redefined as of July 1, 2019 to include LCP in the MIM assets.

MetLife Investment Management claims compliance with the Global Investment Performance Standards (GIPS®) and has prepared and presented this report in compliance with the GIPS standards. MetLife Investment Management has been independently verified for the periods January 1, 2011 through June 30, 2019. The verification report(s) is/are available upon request. A firm that claims compliance with the GIPS standards must establish policies and procedures for complying with all the applicable requirements of the GIPS standards. Verification provides assurance on whether the firm's policies and procedures related to composite and pooled fund maintenance, as well as the calculation, presentation, and distribution of performance, have been designed in compliance with the GIPS standards and have been implemented on a firm-wide basis. Verification does not provide assurance on the accuracy of any specific performance report.

GIPS® is a registered trademark of CFA Institute. CFA Institute does not endorse or promote this organization, nor does it warrant the accuracy or quality of the content contained herein.

The creation date of the High Quality High Yield composite is November 1, 2007 and the inception date is October 1, 2000. Prior to July 1, 2019, the performance of the composite represents the performance that occurred while members of the management team were affiliated with prior firms. The composite has been examined for the periods November 1, 2007 to June 30, 2019 while at another firm. The prior firm, LCP, was verified for the periods November 1, 2007 to June 30, 2019. The verification and performance examination reports are available upon request.

The High Quality High Yield strategy seeks to produce predictable and consistent excess returns relative to a benchmark with a similar level of volatility by investing primarily in higher quality, below investment grade U.S. corporate fixed income securities. In the instance that any of the three major rating agencies has a different quality rating for an individual security, the MIM High Yield team calculates security quality ratings by using "average" language. Effective June 30, 2020, the composite name was changed from High Yield MidGrade to High Quality High Yield. Effective March 1, 2021 the High Quality High Yield composite contains fully discretionary, fee-paying fixed income accounts with assets exceeding \$15 million, managed in accordance with the applicable composite strategy except as otherwise excluded herein. From July 1, 2016 until February 28, 2021, the High Quality High Yield composite does not have a minimum account size. From March 1, 2014 through June 30, 2016, the High Quality High Yield composite includes all fee-paying portfolios with assets in excess of \$15 million, managed on a discretionary basis according to the applicable composite strategy except as otherwise excluded herein. Prior to March 1, 2014 there was no minimum account size for the High Quality High Yield composite. The Firm maintains a complete list and description of composites and a list of broad distribution pooled funds, which are available upon request. Policies for valuing portfolios, calculating performance and preparing GIPS reports are available upon request.

Effective August 1, 2020, the Firm removes accounts that have a significant daily external aggregate cash flow greater than 20% or monthly flow greater than 50%. Between May 1, 2020 and July 31, 2020, there was no significant cash flow policy for this composite. From August 1, 2011 until April 30, 2020, the High Quality High Yield composite had a significant cash flow policy which was applied consistently and within GIPS® standards. The Firm chose to remove accounts that had a significant daily external aggregate cash flow greater than 20% or monthly flow greater than 50%. If any account met these thresholds, then the account was removed from the composite. Aggregate cash flow is defined as additions plus withdrawals over the period. Accounts were removed in the month of the significant cash flow. If the significant cash flow was client directed requiring security liquidation that materially affected account management, the Firm removed the account the month of security liquidations. The account was reinstated to the composite once the portfolio manager had determined that the flow had not impacted the management of the account and the account was invested as per the strategy. Additional information regarding the treatment of significant cash flows is available upon request.

Effective April 1, 2012, the performance benchmark for the High Quality High Yield composite is the ICE BofA U.S. High Yield BB-B Constrained Index, which contains all securities in the ICE BofA U.S. High Yield Master II Index rated BB+ through B- but caps issuer exposure at 2%. From November 1, 2007 to March 31, 2012, the benchmark was the ICE BofA U.S. High Yield Master II Constrained Index, which is constructed to mirror the high yield debt market that includes U.S. dollar publicly issued corporate bonds and deferred interest bonds that are not yet accruing a coupon. Bonds rated in default, or that are not rated are excluded from the index. This change was made to better align the benchmark with the composite's mid-grade focus. From inception date through October 31, 2007, the benchmark was the Bear Stearns High Yield Index, comprised of fixed rate, non-convertible, U.S. dollar denominated securities rated both BB+ and Ba1 or lower with an outstanding par value of at least \$100 million. This change was made due to the ICE BofA benchmark being the more widely used index for institutional investors. The High Quality High Yield Custom Index represents a blend of these indexes during their respective periods as benchmarks for the composite. It is not possible to invest directly in an unmanaged index. All index returns presented are provided to represent the investment environment existing during the time periods shown and will not be covered by the future report of independent verifiers. For comparison purposes, the indices are fully invested and include the reinvestment of income. The returns for the indices do not include any transaction costs, management fees or other costs.

Returns are based on fully discretionary accounts under management and may include terminated accounts. The dispersion of annual returns is measured by the standard deviation among asset-weighted portfolio returns represented within the composite for the full year. Dispersion is not calculated for composites with five or fewer accounts for the whole period.

Performance returns are presented gross and net of fees, include the reinvestment of all income and are calculated in U.S. dollars. Dividend income has been recorded net of all applicable foreign withholding taxes. Net returns have been calculated by reducing the monthly gross returns by a model fee equal to the highest stated ADV fee for the strategy. The investment management fee schedule for the High Quality High Yield strategy is 0.50% on the first \$50 million, 0.45% on amounts from \$50 million to \$100 million and 0.40% on amounts over \$100 million. Net returns have been calculated by reducing the monthly gross returns by the twelfth root of the highest stated in the Firm's Form ADV of 0.50%. Investment management fees are described in greater detail in the Firm's Form ADV. Individual client returns will be reduced by investment management fees and other expenses that the account may incur. Fees have a compounding effect on cumulative results. Actual investment management fees incurred by clients may vary.

Disclaimers

This material is intended for institutional investor, qualified investor and financial professional use only. Not suitable for use with general retail public.

Your capital is at risk. Investing in the strategies discussed herein are subject to various risks which must be considered prior to investing. These risks may include, but are not limited to **Liquidity Risk**, **Interest Rate Risk**, **Credit Risk**, **Prepayment Risk**, and **Counterparty Risk**. For a more complete list please contact your sales representative.

Risk of loss An investment in the strategy described herein is speculative and there can be no assurance that the strategy's investment objectives will be achieved. Investors must be prepared to bear the risk of a total loss of their investment.

This document has been prepared by MetLife Investment Management, LLC (formerly, MetLife Investment Advisors, LLC), a U.S. Securities Exchange Commission-registered investment adviser. MetLife Investment Management, LLC is a subsidiary of MetLife, Inc. and part of MIM.¹ Registration with the SEC does not imply a certain level of skill or that the SEC has endorsed the investment advisor.

MetLife, Inc. provides investment management services to affiliates and unaffiliated/third party clients through various subsidiaries.¹ MetLife Investment Management ("MIM"), MetLife, Inc.'s institutional investment management business, is responsible for investments in a range of asset sectors, public and privately sourced, including corporate and infrastructure private placement debt, real estate equity, commercial mortgage loans, customized index strategies, structured finance, emerging market debt, and high yield debt.
